

Your customers love the apps you give them.

Unfortunately, so do threat actors.

65% of apps attacked
Over 4 weeks in February 2024.

Apps are attacked more than ever before.

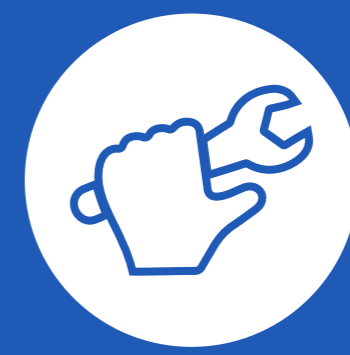

67% of FinServ apps attacked.

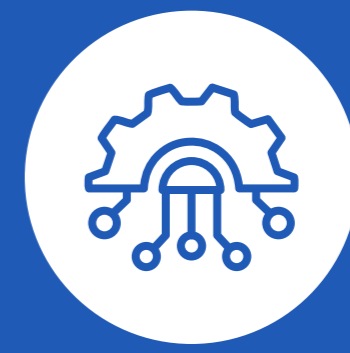

75% of gaming apps attacked.

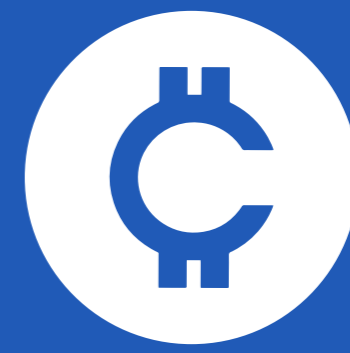

Why is this happening?

Tool democratization
makes reverse engineering increasingly sophisticated and popular.

Surging use of AI/ML
helps threat actors analyze client-side apps more quickly and efficiently.

Cryptocurrencies
make it easier for threat actors to "cash out."

What can app owners do to build more secure apps?

Digital.ai has hundreds of application security customers worldwide who protect over **1 billion instances of applications.**

Embed obfuscation
and anti-tamper into apps at the build stage.

Build RASP
into apps so they can shut down, force step up auth, or deprecate functionality.

Monitor
apps that are in the wild.
