Mobile Application Testing
Readiness Quiz

Can Your Team Release Mobile Apps with Confidence?

Review the checklist below. If you answered "Yes" to any of the boxes, your current testing setup may be limiting your ability to release with confidence.

1. **Device & OS Coverage**
   Are you testing where your users actually are?

   ☐ Your team cannot easily test on the latest devices or OS versions used by your customers

   ☐ Compatibility issues are sometimes discovered only after users begin upgrading their devices

2. **Performance & Real-World Conditions**
   Do your apps behave reliably outside ideal environments?

   ☐ Applications are rarely tested under conditions like poor connectivity or low device resources

   ☐ It is difficult to track performance changes across builds, devices, or environments

3. **Accessibility Validation**
   Can all users interact with your applications?

   ☐ Accessibility issues are discovered late in the release cycle

   ☐ Validating screen reader or assistive technology behavior across devices is difficult

4. **Release Confidence & Visibility**
   Do you know your app is ready to ship?

   ☐ Test failures are difficult to diagnose or separate from environment issues

   ☐ Release readiness is based on assumptions rather than clear testing data

The Digital.ai Difference

One platform that automates release pipelines and integrates complex toolchains.
Unify app delivery, integrate existing tools & scale across any environment.

**Automated mobile app testing and security designed to scale.**
Provide secure, high-quality apps through better automated testing & app protection techniques.

Built-in AI, intelligence, compliance, and governance across all software delivery workflows.
Centralize data, optimize processes, and gain augmented insights for faster, safer
software delivery.

Digital.ai AI-Powered Software Delivery Platform

Helping you harmonize software delivery
